Japa Sans Oriya - Announcement

The Japa Sans Oriya family of fonts supports the broad variety of writing systems that use the Oriya script.

Changes

- Add *nadana* conjunct
- Position dot over eMatra on conjuncts as well as consonants
- Improve combining mark ligatures
- Removed
    - U+0242 LATIN SMALL LETTER GLOTTAL STOP
    - U+A78C LATIN SMALL LETTER SALTILLO

Known Issues

The Kui language requires support for the dot above and double dot above character which are not yet in Unicode. The dot above is currently supported through the U+0307 COMBINING DOT ABOVE codepoint, and the double dot above is supported by the U+0308 COMBINING DIAERESIS codepoint. Once those characters are officially in Unicode, this font will be modified to support the official Oriya-specific codepoints.

Both desktop and web fonts are provided in a single, all-platforms package on the Download page.
